

intimus PacMaster

Cardboard Recycling Shredder

Turn Waste Cardboard into
Sustainable Packing Material

The Fast, Economical, Environmentally Responsible Way to Create Packaging Filler

Every day more and more businesses enter the world of online selling. The result is that every day more and more items have to be packed and shipped. For delicate, sensitive or breakable items that can create a packing challenge.

The PacMaster from intimus allows you to create a virtually unlimited supply of packaging filler made to any desired size and fit in any box or carton.

How it Works?

The PacMaster is extremely simple to operate. Simply feed a cardboard sheet into the front opening and its unique cutting mechanism creates a series of uniform slits / perforations to create a flexible netting like material that can be wrapped around items or placed in packaging as filler.

The PacMaster feed slot is open on three sides allowing it to accept cardboard sheets of any width. As the cardboard passes through the cutting packing material up to 425 mm wide is produced. If the sheet being fed is wider than 425 mm the excess width is trimmed off and can then be fed again.

What Can Be Fed into the PacMaster?

The PacMaster accepts any type of dry, uncoated (waxed) corrugated cardboard, up to 15mm thick or 2-3 sheets that, when combined, do not exceed 15mm in thickness. While new sheets can be used, the greatest cost savings are achieved when using waste cardboard from discarded boxes and cartons commonly received at most facilities. In addition to the savings on the raw materials, users get the significant added benefits of reduced hauling costs of waste cardboard.

Sustainability Advantages - Reuse and Recycle

Many traditional packing fillers are detrimental to environmental and sustainability best practices. Things like polystyrene (styrofoam), bubble wrap and even plastic air filled "pillows" are all petroleum based can often be difficult to recycle and are increasingly being banned. The PacMaster allows you to reuse material that already exists. PacMaster filler can be used over and over again and when it is no longer viable it can be easily recycled to create new cardboard.

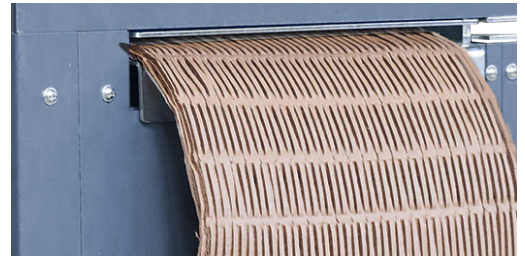

Who Needs a PacMaster?

Any small to medium sized company that ships hand packed items could benefit from a PacMaster including

- Online Retailers
- Gift Shops
- Pack & Ship Stores
- Vineyards & Wineries
- Art Galleries
- Glassworks
- Gourmet Food Shops
- Printers

Built Tough for Long Life

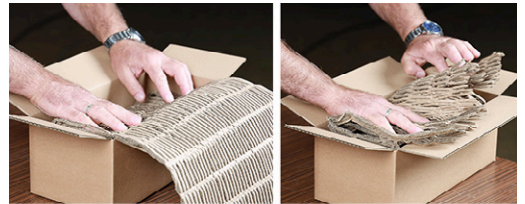

Rugged, durable and built to last, the PacMaster has a proven track record of more than 50 years. It's not uncommon for customers to realize a full return on investment in a year or two. Combine that with a service life that can be measured in decades and maintenance free operation and savings really start adding up.

Packing filler exits cutting head in strips up to 425 mm wide

If sheet width exceeds cutting head, excess is trimmed for reuse

The flexible, netting like filler conforms to any shape item and box
